

Description

Used to connect the RF signals from two antennas to a single input.

Feature

- *Wiring loss can be reduced through internal compensation circuit.
- *In the amplifier system, this coupler facilitates transfer and installation.
- *The coupler and amplifier are connected in series in the line for easy connection.
- *The coupler supports the function of isolating noise in the line and preventing self-excitation.

Specification

Frequency Range	470-950MHZ
attenuation	-4dB , ±1dB
isolation	> -25dB
impedance	50Ω
interface	BNC
Dimensions (L×W×H)	79×60×26mm
weight	0.2kg
